

Kaba expert

This high performance cylinder is especially made for Kaba dealer partners and is suitable for large master key systems. With four radially arranged tumbler pin rows it satisfies high demands.

Features:

The system is registered and protected by several patents
Tested according to EN1303, key-related security grade 6, Ö-Norm B5356, RAL certified

Optional certification to VdS grade B, EN1303 attack-resistance grade 2, burglary protection resistance grade 2-6, RAL certified
Cylinders are available in Euro profile, Swiss round profile, oval profile as well as with insert

Suitable for medium to large master key systems

Safe against manipulation, impressing, bumping, drilling, tearing off and vandalism

Permutation capacity (theoretical number cylinder differs): 907 trillion

Areas of Applications:

- Private homes
- Apartment buildings
- Business and industrial sites
- Hotels and pensions
- Schools, universities and clinics
- Office buildings, public authorities, museums
- Power utilities, public transport

Advantages:

Security – Kaba master key systems fulfill a high security standard thanks to radially arranged tumbler pin rows, best materials, exact precision milling and unique cylinder construction

High copy protection thanks to the security card as well as computer controlled milling process and key blank protection

Investment security – the master key system can be expanded at any time and can be integrated into electronic locking systems

Convenience – the reversible key can be inserted into the lock cylinder in any position and requires little maintenance

Organization – the customer determines in the master key system which key opens which door(s)

12 key different key clip colors for easy recognition

Modular – thanks to their modular construction, the cylinder cores (inserts) can be used in other types of cylinders, such as single cylinders, thumbturn cylinders, cam locks, etc.
